A cognitive evaluation should be part of the care for a patient who has had a heart attack, and the method of assessing cognition should be clearly explained to the patient." ** "This is one of the few comprehensive cognitive books out there, with a clear and scientific method to do the evaluation. It presents a very interesting summary of the cognitive evaluation after a stroke, and of the approaches, with a very detailed bibliography and many clinical cases. It is very complete, and very user-friendly." *** "This book is really an excellent companion to other resources. It should be the first one, not only because it covers all the different cognitive domains, but because it takes a very complete approach, with an extremely rich bibliography, and it allows for a good cognitive assessment in a very efficient way, as we can see in many case studies. It is an indispensable book for neuropsychologists and doctors." **** "It has a very unique approach: it is organized in different chapters for each cognitive domain, taking care of the different techniques to be used. It is not a book for one special domain, but for all the others." "This book does a very good job describing the cognitive domains and, through clinical cases, helps us to understand how the cognitive functions can be evaluated. It is very well organized and easy to read. I consider it a very good reference for clinicians." ***** "This book is a gold mine for everyone who wants to know more about the neuropsychological evaluation after a stroke. It is a very extensive and comprehensive text, which clearly explains the different neuropsychological domains and the tools which can be used to evaluate them. It is well-organized, user-friendly, and has a lot of rich information." "This book is an excellent reference for clinicians and researchers. It gives a complete overview of the neuropsychological evaluation after a stroke, and it is particularly good for new professionals in the area, because it introduces a clear and very efficient assessment method for cognitive dysfunction. It offers abundant and detailed information about the cognitive domains, and it has a very rich bibliography and an extraordinary reference list." "In my opinion this is a very good reference for clinicians and researchers. It gives a complete overview of the neuropsychological evaluation after a stroke and it introduces a clear and very efficient assessment method for cognitive dysfunction. It is well-organized, user
